It is with great pleasure that we present the proceedings of the 4th International Symposium on Visual Computing (ISVC 2008) in Las Vegas, Nevada. ISVC offers a common umbrella for the four main areas of visual computing including vision, graphics, visualization, and virtual reality. Its goal is to provide a forum for researchers, scientists, engineers and practitioners throughout the world to present their latest research findings, ideas, developments and applications in the broader area of visual computing. This year, ISVC grew significantly; the program consisted of 15 oral sessions, 1 poster

session, 8 special tracks, and 6 keynote presentations. The response to the call for papers was very strong; we received over 340 submissions for the main symposium from which we accepted 102 papers for oral presentation and 70 papers for poster presentation. Special track papers were solicited separately through the Organizing and Program Committees of each track. A total of 56 papers were accepted for oral presentation and 8 papers for poster presentation in the special tracks. All papers were reviewed with an emphasis on potential to contribute to the state of the art in the field. Selection criteria included accuracy and originality of ideas, clarity and significance of results, and presentation quality. The review process was quite rigorous, involving two to three independent blind reviews followed by several days of discussion. During the discussion period we tried to correct anomalies and errors that might have existed in the initial reviews.

Whenever I speak with aspiring Hollywood writers, the first question they ask is ;\$How do I break in? How do I get an agent and how do I get that first job.;” But getting an agent and that first job isn;t going to get you very far. What aspiring writers should be asking is ;\$How do I build a successful career in Hollywood?;” The agent and the first job is just the beginning. Hollywood is full of writers who sold one or two scripts and were never heard from again. What it takes to succeed on your first job and then build on it to get the next job and the next is what separates the ;\$One script wonder;” from the writer with a Hollywood career. Among the questions aspiring writers really need to ask are: „« How Do I Know When My Spec Script Is Ready For Submission? „« What Does An Agent Look For In A Writer Beyond Their Scripts? „« Once I Have An Agent What Else Should I Be Doing? „« When I Go To A ;\$Meet & Greet,;” What Do I Say? „« How Do I Prepare For The Different Types Of Pitch Meetings?

„« How Do I Handle Notes I Disagree With? „« Do I Need A Lawyer And A Manager? Most writers discover the answers to these questions through trial and error. But in Hollywood, errors can be costly to a writer's career. More than one writer has seen his career thwarted due to a simple lack of awareness. The goal of *Writing For The Hollywood* is to arm aspiring writers with as much information as possible so not only will the road to their first agent and sale be easier, but they'll also be able to avoid costly mistakes and have a much better chance of turning that first job into a another and another. *Writing For The Hollywood* begins by asking the writer to do some serious self-examination as it lists the basic *Ingredients* beyond a good script that a writer will need if they expect to build a career as a Hollywood writer. From here it goes on to cover topics such as dealing with executives, the different types of pitch meetings, the script notes process, the realities of working on a television writing staff and avoiding potential land mines that can damage a writer's forward progress. *Writing for The Hollywood* provides invaluable information for anyone who's ever aspired to write for the screen, by someone who's actually been there and done it. NIDL evaluated the thin, large screen, flat panel Pioneer 50 inch plasma display panel (PDP) to determine its usefulness to the display of images that are of interest to imagery analysts and GI specialists, As NIDL's ratings show, the Pioneer PDP-502MX is not going to be useful as the primary imagery analysis display on an IEC workstation, It fails many of the IEC requirements so we rate it "F" for IEC

workstation monoscopic and stereo applications, Rather, its usefulness comes from its large, 50 inch diagonal size and its high pixel count for a PDP, up to 1280 x 768 pixels in the 16:9 and 1024 x 768 pixels in the 4:3 format, that could make it appropriate for group conference discussions, The Pioneer PDP-502MX has a relatively good gray scale capability; it can display 245 of 256 differences in input levels for a 7,94 bit depth, Its linearity surpasses that we have measured for CRT monitors, and comes about because of its precisely formed pixel structure, This pixel structure, like in LCD monitors, can have several non-operating pixels, It has a very high (exceeds 60% over the entire screen) and a very uniform 1-pixel-on/1-pixel-off contrast modulation for both the horizontal and vertical directions, The PDP can have a maximum luminance up to 40 fL for a small patch of white, and a minimum luminance of 0.2 fL For full screen white, its luminance is 18 fL, limited by internal circuitry to minimize panel heat generation and its luminance is more uniform than a CRT monitor, The reflectivity and the viewing angle are about the same as for a CRT monitor, It has a capability to do stereo imaging at 43 Hz per eye, which is on the borderline of visible flicker, and its dynamic range in stereo is good, The extinction ratio is poor, and is probably limited by the long persistence of the green phosphor, Most who have seen the Pioneer PDP-502MX would love to have one, at least for football games, The price is about \$18,000. Nikkei Microdevices' 2006 report on flat panel display (FPD) industry includes:

- Exclusive in-depth interviews with 28 top executives in the industry
- Over 250 information-packed figures, tables and pictures
- Proprietary intelligence not available anywhere else

In 2006, competitive conditions in the flat panel display (FPD) industry will change significantly. The era in which competition was primarily based on increasing

investment and glass substrate sizes is over. Henceforth, overall capability, including parts/material strategy and equipment strategy, will become the decisive factor. By 2010, parts and material costs will account for 80% of the total cost of large-size LCD panels, which will drive future market expansions; thus, parts and materials will make up most of the value addition in panels. Leading panel makers are starting to reinforce their cooperative relationships with parts and material makers, as well as with equipment makers.
